

# BookMyFlight

readme:-

We have made different folders for different webpages. Folder face contains the index.html file which is the homepage of our HTML and CSS of other pages is in different folders for eg, List folder contains the list of flights available for user , Payment folder contains html and CSS of payment page.

We have made a navbar that contains various buttons that can be used to access different features in our website. We have included a login button which will help user to make their new account if they don't already have it. This login button will redirect user to a login page where user can enter his email id and password. Once account is created user will be redirected to a page which will show you the details of login user. From any page user can return to home page by clicking on back/home button.

From home page user can Enter their flight information like the date on which they want to book, their destination, type of ticket they want to book such as, student, senior citizen, armed forces etc. The user can also choose in which class he wants to travel such as business class or economy.

Once they have entered all the details they can search for the available flights. From there the user can choose the flight that best suits him. Once user has decided then user can click on book button to proceed to the payment part.

In Payment page, user needs to enter card details and choose mode of payment. User also needs to agree to the covid terms and conditions to confirm booking.
